

Researching Well for teams

Researching Well is a series of 40 workshops that support researchers during each stage of the research process. The program facilitates collaboration between researchers, colleagues, clients, students and subjects. The workshop guides scaffold each stage of the research process including proposal writing, clarifying the research topic, drafting hypotheses, ethics applications, data collection, data analysis, sense-making and report writing, including a variety of report genres.

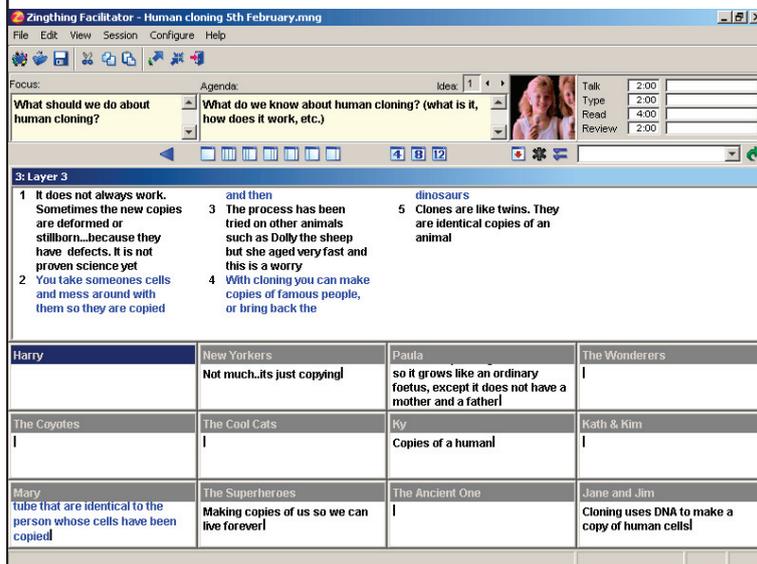

Researching in teams

- Expands what we mean by research to include co-construction of knowledge
- Helps researchers research their own practice
- Helps young people think and act like researchers
- Facilitates a process of dialogue between the researcher and the subjects
- Rapidly captures large amounts of rich data from subjects instantly
- Researchers are able to change the question sets during the course of a research activity
- Portable – connects to a portable computer and a data show.
- Collects data electronically; no transcription required.
- Taps into emergent knowledge rather than past concepts

Call us to:

- Arrange an interactive workshop for staff or students
- Undertake research methods training
- Train as a Researching Well consultant
- Ask for a quotation
- Collaborate on a research project

Researching Well provides practical support for:

- Academics in a teaching or research role
- Community development workers
- Government agencies engaged in research
- Market researchers
- Political researchers
- Scientists
- Students at school and university
- Social scientists

The Researching Well workshop guides

The Researching Well workshops comprise Master Templates of research topics as well as the workshop guides for undertaking the research.
